Class:

BS DATA SCIENCE

Prof:

Prof. Aleena Aslam

I give this prompt:

Give me prompt, Create a modern AI-powered restaurant website on AI Tool like replit with a visually appealing homepage showing the restaurant ambiance, seating, and staff in elegant uniforms. Include AI-based food recommendations, interactive menu, and chatbot support. Add online ordering, table reservation, and secure payment system. Design a clean, responsive UI for mobile and desktop. Ensure smooth navigation with high-quality visuals. Build a backend for order management, customer data, and analytics.

To Chatgpt and he gave me this prompt:

Frontend (UI/UX)

- Build a **visually stunning homepage** featuring:

- High-quality images/videos of restaurant ambiance, seating areas, and staff in elegant uniforms
 - A hero section with call-to-action buttons: *Order Now* and *Reserve Table*
- Design a **clean, minimal, and responsive UI** optimized for mobile, tablet, and desktop
- Use smooth animations, hover effects, and modern layouts (grid/flexbox)
- Include:
 - Interactive menu with categories, images, prices, and filters
 - Featured dishes and chef recommendations
 - Customer reviews/testimonials
 - Sticky navigation bar and smooth scrolling

AI Features

- Implement an **AI-powered food recommendation system**:
 - Suggest dishes based on user preferences (spicy, vegan, etc.)
 - Use OpenAI API (or similar) for intelligent suggestions
- Add an **AI chatbot assistant** that:
 - Answers menu-related questions
 - Assists with reservations and orders
 - Provides real-time support

Core Features

- **Online Ordering System**:
 - Add to cart, modify items, checkout flow
- **Table Reservation System**:
 - Select date, time, and number of guests
 - Handle availability dynamically
- **Secure Payment Integration**:
 - Support cards and digital wallets (Stripe or similar)

Backend

- Build a scalable backend with:
 - REST API endpoints for orders, users, reservations
 - Order management system (create, update, track orders)
 - Customer data storage and authentication (JWT-based login/signup)
 - Reservation management system
- Database:
 - Use MongoDB or PostgreSQL

Admin & Analytics

- Create an **admin dashboard**:
 - View orders, revenue, and popular dishes

- Track customer activity
- Basic analytics (daily sales, trends)

□ Tech Stack

- Frontend: React or Next.js
- Backend: Node.js + Express
- Database: MongoDB / PostgreSQL
- AI Integration: OpenAI API
- Payment: Stripe API

🔒 Additional Requirements

- Ensure:
 - Fast loading speed and optimized assets
 - Secure authentication and data handling
 - Clean, maintainable code structure
 - SEO-friendly structure
- Use modern best practices and scalable architecture
- **Screen shoots:**

After that I pasted this prompt to “Replit” and he processes almost 17 minutes and gave me this complete Restaurant website.

“At the end I want to say that using Ai ethically is too much beneficial for all the programmers and all other fields.”

Here is the URL of this Restaurant website that I created from Ai Tool:

<https://ai-menu-master--MZeeshan045.replit.app>
